T4 Report generated

7 Oct 2026 · data to 9:30 IST

Prices as of ~9:40 IST (delayed)

Built on the NYMEX contracts that MCX tracks. Your TradingView plan still blocks MCX bars (re-tested this run: MCX:CRUDEOILM!! returned "permission denied, mcx_free"), so this report uses hourly bars from NYMEX WTI crude (CL!!) and Henry Hub natural gas (NG!!), both on the November contract, converted to IST. The sample is the last 300 hourly bars: **12 complete MCX sessions, 21 Sep – 6 Oct 2026**, plus today to 9:30 IST. The 9:30 IST bar was still forming and is excluded from the statistics. Each hour's swing is its high-to-low range as a % of price. Every chart is shown in full (typical hour, average hour and volume, values printed on the bars); the complete hourly table is in the appendix.

The market wakes up after 17:30

V-WINDOW

17:30–21:30

IST, US session

THE V-WINDOW ⚡ · TRADE INSIDE

17:30 – 21:30 IST

📊 **Crude** averages **1.32%** per hour in the window (≈₹115), against 0.56% in the morning: 2.4×. Europe's 13:30 hour is now just as big (1.33% typical).

🔥 **Gas** averages **1.50%** per hour (≈₹4.5), against 0.36% in the morning: 4.2×. Only the US session moves it, starting at 16:30.

🕒 **Mornings (9:00–11:30) are for planning, not trading.** Asia has already moved crude before MCX opens.

What changed in this run

- ⚠️ **Tuesday (6 Oct) was another Europe day for crude.** Its biggest hour was 13:30 (1.60% on 11,277 contracts), outside the window for the second day running. The window still averaged 1.09%, led by 20:30 at 1.49%.
- ⚠️ **Crude's typical peak moved to 13:30** (1.33%, was 1.24%), a hair above 19:30 (1.31%). 13:30 beat the London hour on 8/12 days (was 7): in-window peaks stay at 7/12.
- ✅ **Gas followed the pattern on Tuesday.** Its biggest hour was 17:30 (1.69% on 15,258 contracts) after 1.33% at 16:30. In-window peaks stay at 11/12; the window averaged a modest 1.03%.
- ⚠️ **Gas's later window hours eased.** 18:30 typical fell to 1.35% (was 1.61%) and 19:30 to 1.40% (was 1.51%). 17:30 now leads on typical (1.75%), average and volume. Window average 1.50% (was 1.52%).
- ⬆️ **Gas estimate up ₹5.1 to ₹301.6** (was ₹296.5): **300 CE and 300 PE are both at the money now.** Crude up ₹37 to ₹8,689 (was ₹8,652): no status change; 8600 PE sits right on the 1% edge.
- ✅ **Today so far (Wed 7 Oct) is quiet.** Crude's biggest hour is 0.52% (6:30) and gas's 0.67% (5:30). EIA crude inventories land at 20:00 IST tonight, inside the window.

Event clock

- Today (Wed 7 Oct), 20:00 IST:** EIA crude inventories, inside the crude window. On 30 Sep that hour moved 1.32%.
- Tomorrow, Thu 8 Oct, 20:00 IST:** EIA gas storage, the biggest weekly event for gas (5.8% hour on 24 Sep).
- Thu 15 Oct, 21:30 IST:** next EIA crude report, a day late for the US Columbus Day holiday. It lands on crude options expiry day.
- 15 Oct (8 days):** Crude Oil Mini options expire.
- 23 Oct:** NatGas Mini options expire.
- 25 Oct:** UK clocks change; Europe hours shift one hour later (London open 13:30 IST).
- 1 Nov:** US clocks change; US hours and the V-Window shift one hour later, MCX closes 23:55. Asian times stay the same.

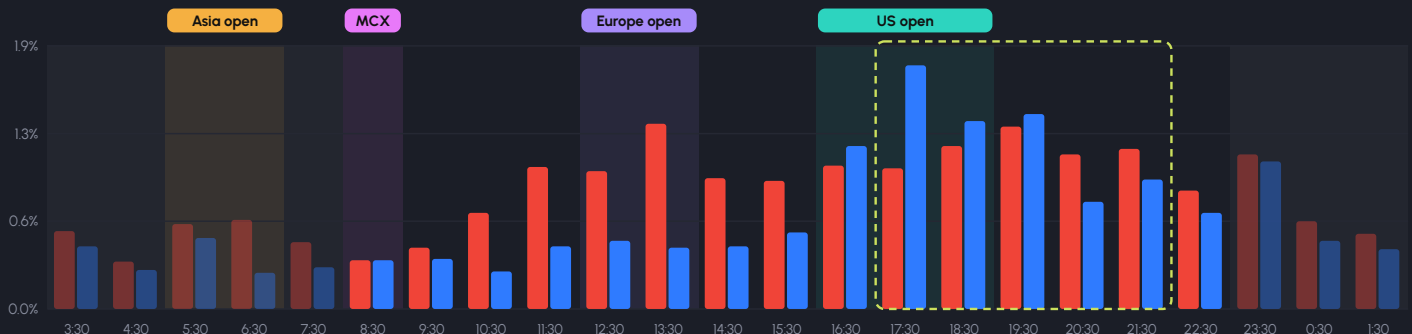

VOLATILITY ACROSS THE GLOBAL DAY

Both contracts, around the clock

Hourly swing by IST start time · continental opens marked · MCX session 9:00–23:30 IST

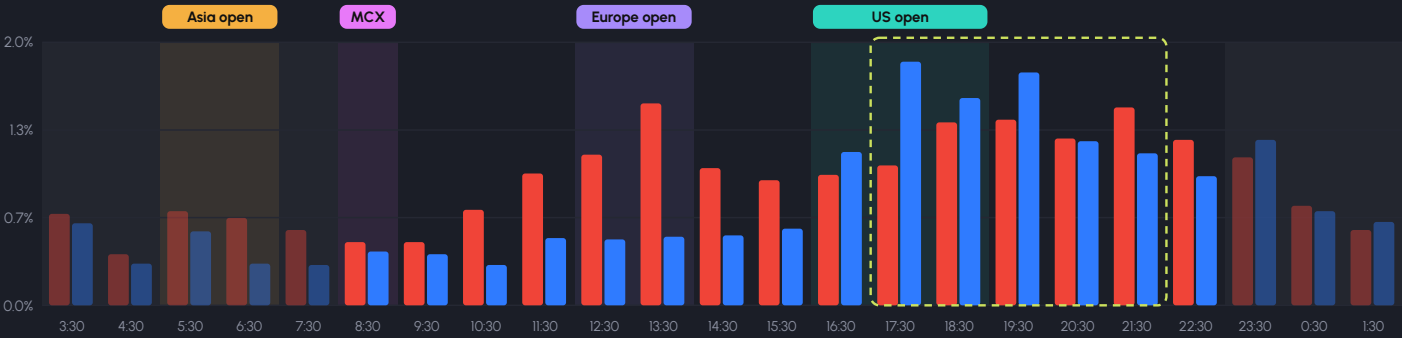

■ Crude Oil ■ Natural Gas ■ Asia open ■ MCX open ■ Europe open ■ US open ■ V-Window ■ MCX closed

TYPICAL (MEDIAN) HOUR · HIGH-LOW RANGE %

Crude peaks at 13:30 (1.33%) · gas peaks at 17:30 (1.75%) IST · faded bars are hours when MCX is closed.

AVERAGE HOUR · HIGH-LOW RANGE %

Crude peaks at 13:30 (1.50%) · gas peaks at 17:30 (1.81%) IST · faded bars are hours when MCX is closed.

● Continental opens: who moves what

Each open is compared with the hour just before it across 13 sessions. "9/13" means the opening hour moved more than the hour before on 9 of 13 days.

SESSION	OPENS (IST)	CRUDE OIL	NATURAL GAS
Asia Tokyo	5:30	STRONG 2.03× swing, 3.45× volume, 13/13. Happens before MCX opens, so it shows up as the 9:00 gap.	MINOR 1.63× from a near-dead base, to about 0.51%.
Asia Shanghai / Singapore	6:30	NONE 7/13, 1.02× swing.	NONE 0/13.
India MCX	9:00	NONE 2/13, 8:30 and 9:30 are the quietest daytime hours at 0.35–0.44%.	MINOR Volume 1.73×, but the swing stays near 0.35%.
Europe London / Frankfurt	12:30	DELAYED The open is flat (1.01× swing, 7/13). The move comes at 13:30, 1.11× swing, 8/13, 1.33% typical. It was the day's biggest hour on Monday (2.12%) and Tuesday (1.60%).	NONE 7/13, 1.0×. Europe trades European gas, not Henry Hub.
US Pre-market and data	16:30–18:00	BUILDING 16:30 already at 1.03% typical; volume 1.33× at 17:30 (7/13).	MAIN EVENT Wakes at 16:30 (2.36×, 11/13); 17:30 hits 1.75% with 2.66× volume (11/13).
US NYMEX and stocks	18:30–19:00	STRONGEST NYMEX open 1.47× (11/13); 1.01–1.31% typical through the window, window peak 19:30 at 1.31%, volume peak 21:30 at 25.120.	HOLDING 1.35% at 18:30 and 1.40% at 19:30, then fades after 20:30.
US Settlement	23:30–0:30	AFTER MCX CLOSE About 1.11%; feeds the next morning's gap.	AFTER MCX CLOSE About 1.06% (12/13 bigger than 22:30); feeds the gap.

AVOID

9:00–11:30

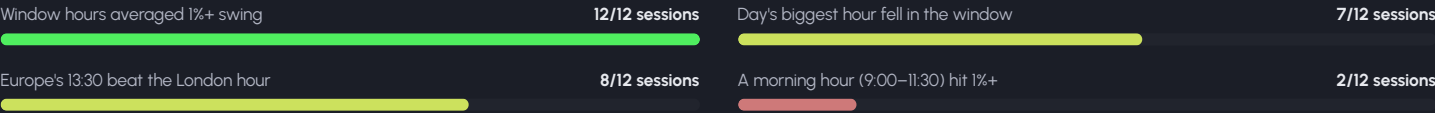

0.56% avg swing per hour

Session clock, IST

- 5:30 – 6:30 · Asia opens
Tokyo wakes crude up: the swing roughly doubles to about 0.61–0.64%, bigger than the hour before in all 13 sessions. MCX is still shut, so this arrives as the 9:00 opening gap.
- 9:00 · MCX opens
Quietest part of the day. The 8:30 and 9:30 hours move only 0.35–0.44%, about ₹30–38, on roughly 2,062 contracts.

- 12:30 · London opens**
Typical 0.99%, barely above the hour before (1.01×). Volume rises 1.52× but price usually doesn't follow. It was lively on 1 Oct (2.07%) and 2 Oct (1.80%), quiet since: 0.87% on Monday and 0.77% on Tuesday.
- 13:30 · Europe follow-through**
The real European move, and now crude's biggest typical hour: 1.33% typical, 1.50% average. It beat the London hour in 8 of 12 sessions, up from 7 last report, and was the day's biggest hour on both Monday (2.12%) and Tuesday (1.60%).
- 17:30 – 18:30 · US data and NYMEX**
US data lands at 18:00 and NYMEX opens at 18:30. Volume jumps from 10,341 to 22,553 contracts an hour. 18:30 was the day's biggest MCX hour in 3 of 12 sessions, including 2.59% on 2 Oct.
- 19:30 – 20:30 · EIA on Wednesdays**
Biggest typical hour inside the window at 1.31%. The EIA crude report lands at 20:00 on Wednesdays, which is today. On 30 Sep that hour moved 1.32%.
- 21:30**
Biggest average swing inside the window (1.47%) and peak volume (25,120 contracts). Typical swing 1.15%.
- 23:30 · MCX closes**
NYMEX settles in the next hour at about 1.11%. MCX is shut, so that move carries into the next morning's gap.

How often it happened

What these counts mean. These are observed frequencies over 12 sessions, not forecasts. The US window averaged a 1%+ hourly swing on every one of the 12 days, the most dependable finding in the report. The day's single biggest hour landed in the window on 7 days; the other five came from Europe (13:30 on 22 Sep, 25 Sep, 5 Oct and 6 Oct) and from 22:30 on 1 Oct, just after the window. Crude really has two sessions: Europe and the US. Twelve sessions is a small sample, so treat this as a strong tendency rather than a rule.

AVOID

9:00–16:00

Asia and Europe don't move it

Session clock, IST

● 5:30 · Asia opens

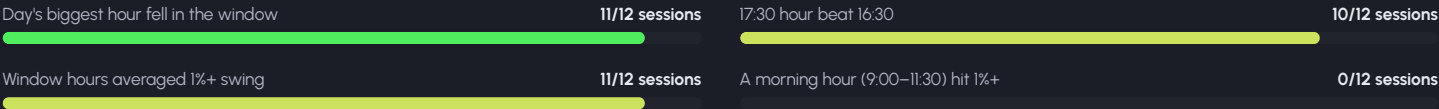

A small pickup to about 0.51% from a near-dead base. Not tradeable.

● 9:00 – 16:00

Flat through the MCX morning and the London open: 0.27–0.55% an hour, about ₹0.8–1.7, on a few hundred to 1,980 contracts.

- 16:30 · US pre-market**
Wakes up: 1.17% typical, 2.36× the hour before and bigger on 11 of 13 days. It moved 1.68% on Monday and 1.33% on Tuesday.
- 17:30 · US data**
1.75% typical, 1.81% average, 2.66× the volume of the hour before. It also has the most volume (11,863 contracts) and was the day's biggest hour on 5 of the last 7 sessions, including 1.69% on Tuesday.
- 18:30 – 19:30 · NYMEX**
Stays strong at 1.35% and 1.40% typical on 10,975–11,802 contracts an hour; 19:30 moved 2.21% on 2 Oct.
- 20:00 · Thursdays**
EIA gas storage. On 24 Sep gas moved about 5.8% in that single hour, from \$2.998 to \$3.176; on 1 Oct it moved 1.30%. The next one is tomorrow, Thu 8 Oct.
- 20:30 onwards**
Fades to 0.77–0.93%. NYMEX settlement after the MCX close lifts it to about 1.06%, which feeds the next morning's gap.

How often it happened

What these counts mean. Gas is a one-session market. Its biggest hour landed in the US window on 11 of 12 days; the exception, 5 Oct, peaked at 16:30 (1.68%), just before it. The trade-off is consistency: on 21 Sep the window averaged only 0.84% and on Tuesday just 1.03%, so some evenings are quiet. The window average is lifted by the 24 Sep EIA hour (about 5.8%); the typical (median) hours are the steadier guide.

● Your October strikes against today's estimate

Distance is intrinsic moneyness in rupees against the NYMEX-based estimate (crude ₹8,689, gas ₹301.6). + means in the money, – means out of the money; within about 1% of price is at the money. Live MCX strike premiums, volume and open interest need MCX data or your broker's option chain.

This report describes how NYMEX crude and gas have moved hour by hour over a short sample (12 complete sessions) and uses them as a proxy for MCX. Hit counts are past frequencies, not probabilities. Rupee figures are estimates from NYMEX prices × USD/INR, not MCX quotes. Volatility cuts both ways: the hours that move most can move against you just as fast. Check live MCX prices, option premiums, margins and contract specifications with your broker before trading.
