T4 Report generated

8 Oct 2026 · data to 10:30 IST

Prices as of ~10:40 IST (delayed)

Built on the NYMEX contracts that MCX tracks. Your TradingView plan still blocks MCX bars (re-tested this run: MCX:CRUDEOILM!! returned "permission denied, mcx_free"), so this report uses hourly bars from NYMEX WTI crude (CL!!) and Henry Hub natural gas (NG!!), both on the November contract, converted to IST. The sample is the last 300 hourly bars: **12 complete MCX sessions, 22 Sep – 7 Oct 2026**, plus today to 10:30 IST. The 10:30 IST bar was still forming and is excluded from the statistics. Each hour's swing is its high-to-low range as a % of price. Every chart is shown in full (typical hour, average hour and volume, values printed on the bars); the complete hourly table is in the appendix.

IST, US session

THE V-WINDOW ⚡ · TRADE INSIDE

17:30 – 21:30 IST

📊 **Crude** averages **1.31%** per hour in the window (≈₹114), against 0.55% in the morning: 2.4x. Europe's 13:30 hour is now just as big (1.33% typical).

🔥 **Gas** averages **1.55%** per hour (≈₹4.9), against 0.36% in the morning: 4.3x. Only the US session moves it, starting at 16:30.

🕒 **Mornings (9:00–11:30) are for planning, not trading.** Asia has already moved crude before MCX opens.

What changed in this run

- ✅ **Wednesday (7 Oct) fitted the window for crude.** Its biggest hour was 18:30, the NYMEX open (1.37% on 17,865 contracts). The EIA hour at 19:30 moved 0.97%; the window averaged 1.07% as crude fell 1.1% on the day.
- ⬆️ **Gas's 19:30 hour swung 3.00% on Wednesday** on 23,848 contracts, and gas closed the day up 3.1%. Every gas window in the sample now averages 1%+ (12/12, was 11/12).
- ⚠️ **Gas's 19:30 hour strengthened.** Typical 1.51% (was 1.40%) and average 1.87%, now the biggest average hour. 17:30 is still the typical peak at 1.69% (was 1.75%). Window average 1.55% (was 1.50%).
- ⚠️ **Europe cooled for crude.** 13:30 moved only 0.49% on Wednesday and beat the London hour on 7/12 days (was 8). It is still crude's typical peak (1.33%); 18:30 rose to 1.27% (was 1.17%).
- ⬆️ **Gas up ₹13.8 to ₹315.4** (was ₹301.6): **310 CE is now in the money**, 300 CE in and 300 PE out. Crude up ₹19 to ₹8,708: **8600 PE slips out of the money**; 8700 CE stays at the money.
- ⚠️ **Today so far (Thu 8 Oct):** gas reopened 2.3% higher with a 1.81% hour at 3:30; crude's biggest hour is 0.96% (6:30). EIA gas storage lands at 20:00 IST tonight.

Event clock

- Today (Thu 8 Oct), 20:00 IST:** EIA gas storage, the biggest weekly event for gas (5.8% hour on 24 Sep).
- Wed 14 Oct:** no EIA crude report at 20:00; the US Columbus Day holiday (12 Oct) pushes it a day later.
- Thu 15 Oct, 21:30 IST:** next EIA crude report, a day late for the US Columbus Day holiday. It lands on crude options expiry day.
- 15 Oct (7 days):** Crude Oil Mini options expire.
- 23 Oct:** NatGas Mini options expire.
- 25 Oct:** UK clocks change; Europe hours shift one hour later (London open 13:30 IST).
- 1 Nov:** US clocks change; US hours and the V-Window shift one hour later, MCX closes 23:55. Asian times stay the same.

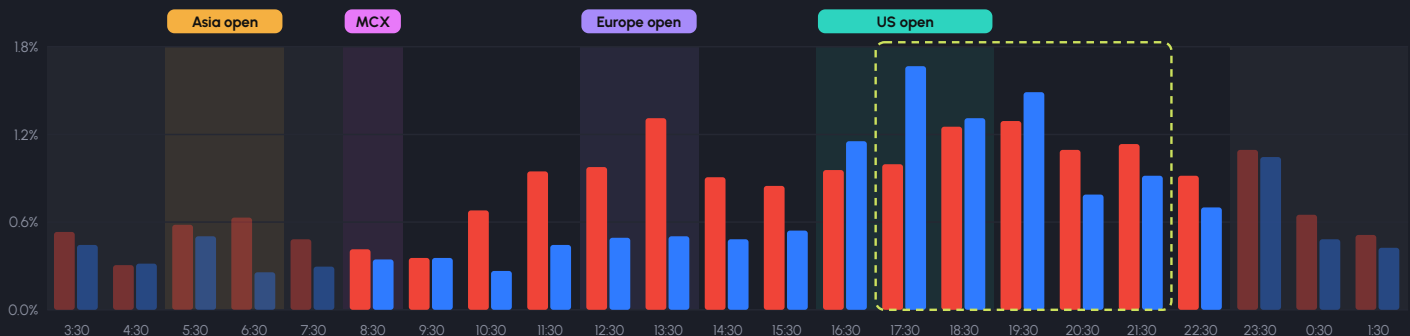

VOLATILITY ACROSS THE GLOBAL DAY

Both contracts, around the clock

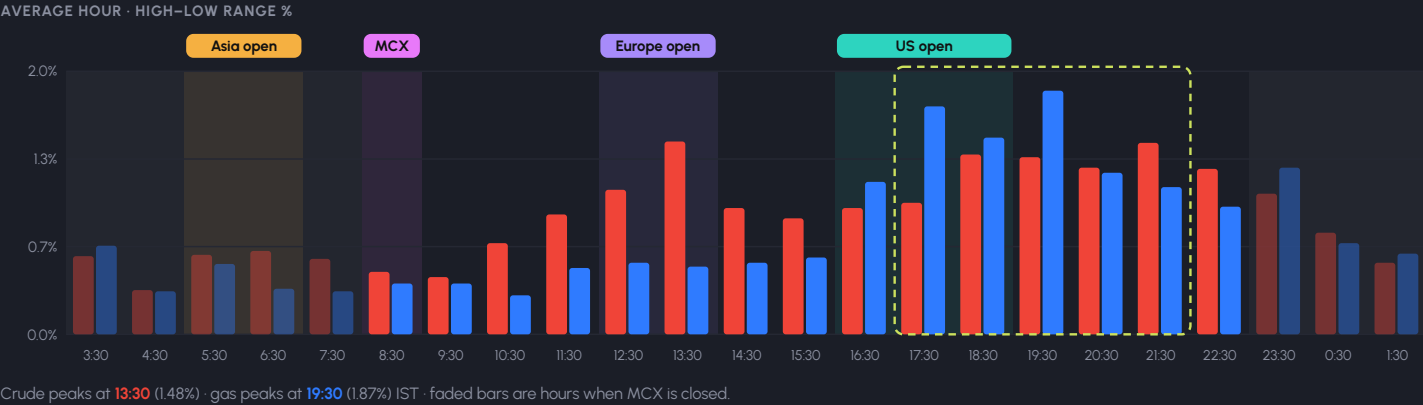

Hourly swing by IST start time · continental opens marked · MCX session 9:00–23:30 IST

Crude Oil Natural Gas Asia open MCX open Europe open US open V-Window MCX closed

TYPICAL (MEDIAN) HOUR · HIGH-LOW RANGE %

Crude peaks at 13:30 (1.33%) · gas peaks at 17:30 (1.69%) IST · faded bars are hours when MCX is closed.

● Continental opens: who moves what

Each open is compared with the hour just before it across 13 sessions. "9/13" means the opening hour moved more than the hour before on 9 of 13 days.

SESSION	OPENS (IST)	CRUDE OIL	NATURAL GAS
Asia Tokyo	5:30	STRONG 1.91x swing, 3.45x volume, 13/13. Happens before MCX opens, so it shows up as the 9:00 gap.	MINOR 1.6x from a near-dead base, to about 0.51%.
Asia Shanghai / Singapore	6:30	NONE 8/13, 1.05x swing.	NONE 1/13.
India MCX	9:00	NONE 2/13, 9:30 and 8:30 are the quietest daytime hours at 0.36–0.42%.	MINOR Volume 1.31x, but the swing stays near 0.35%.
Europe London / Frankfurt	12:30	DELAYED The open itself is mixed (1.25x swing, 8/13). The move comes at 13:30, 1.11x swing, 8/13, 1.33% typical. It was the day's biggest hour on 5 and 6 Oct (2.12%, 1.60%), but only 0.49% on Wednesday.	NONE 7/13, 1.15x. Europe trades European gas, not Henry Hub.
US Pre-market and data	16:30–18:00	BUILDING 16:30 already at 0.97% typical; volume 1.33x at 17:30 (6/13).	MAIN EVENT Wakes at 16:30 (2.36x, 10/13); 17:30 hits 1.69% with 2.47x volume (11/13).
US NYMEX and stocks	18:30–19:00	STRONGEST NYMEX open 1.48x (12/13); 1.01–1.31% typical through the window, window peak 19:30 at 1.31%, volume peak 21:30 at 25,090.	HOLDING 1.33% at 18:30 and 1.51% at 19:30, then fades after 20:30.
US Settlement	23:30–0:30	AFTER MCX CLOSE About 1.11%; feeds the next morning's gap.	AFTER MCX CLOSE About 1.06% (12/13 bigger than 22:30); feeds the gap.

AVOID

9:00–11:30

0.55% avg swing per hour

Session clock, IST

- 5:30 – 6:30 · Asia opens
Tokyo wakes crude up: the swing roughly doubles to about 0.59–0.64%, bigger than the hour before in all 13 sessions. MCX is still shut, so this arrives as the 9:00 opening gap.
- 9:00 · MCX opens
Quietest part of the day. The 9:30 and 8:30 hours move only 0.36–0.42%, about ₹31–37, on roughly 1,896 contracts.

- 12:30 · London opens

Typical 0.99%, 1.25× the hour before. Volume rises 1.56× but price often doesn't follow. It was lively on 1–2 Oct (2.07%, 1.80%) and quieter since: 0.87%, 0.77% and 0.76% from Monday to Wednesday.
- 13:30 · Europe follow-through

The real European move, and now crude's biggest typical hour: 1.33% typical, 1.48% average. It beat the London hour in 7 of 12 sessions, down from 8 last report. It was the day's biggest hour on Monday (2.12%) and Tuesday (1.60%), but only 0.49% on Wednesday.
- 17:30 – 18:30 · US data and NYMEX

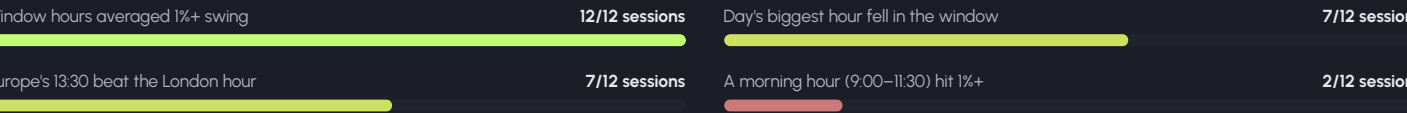

US data lands at 18:00 and NYMEX opens at 18:30. Volume jumps from 10,258 to 22,552 contracts an hour. 18:30 was the day's biggest MCX hour in 3 of 12 sessions, including 2.59% on 2 Oct and 1.37% on Wednesday.
- 19:30 – 20:30 · EIA on Wednesdays

Biggest typical hour inside the window at 1.31%. The EIA crude report lands at 20:00 on Wednesdays; that hour moved 0.97% yesterday and 1.32% on 30 Sep. Next week's report moves to Thu 15 Oct, 21:30 IST.
- 21:30

Biggest average swing inside the window (1.47%) and peak volume (25,090 contracts). Typical swing 1.15%.
- 23:30 · MCX closes

NYMEX settles in the next hour at about 1.11%. MCX is shut, so that move carries into the next morning's gap.

How often it happened

What these counts mean. These are observed frequencies over 12 sessions, not forecasts. The US window averaged a 1%+ hourly swing on every one of the 12 days, the most dependable finding in the report. The day's single biggest hour landed in the window on 7 days; the other five came from Europe (13:30 on 22 Sep, 25 Sep, 5 Oct and 6 Oct) and from 22:30 on 1 Oct, just after the window. Crude really has two sessions: Europe and the US. Twelve sessions is a small sample, so treat this as a strong tendency rather than a rule.

AVOID

9:00–16:00

Asia and Europe don't move it

Session clock, IST

● 5:30 · Asia opens

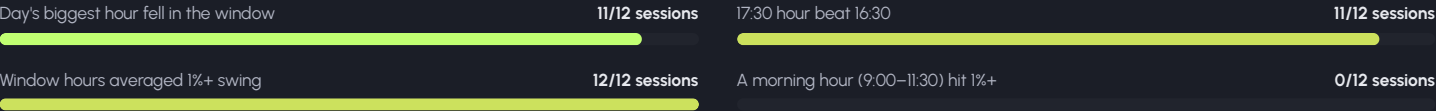

A small pickup to about 0.51% from a near-dead base. Not tradeable.

● 9:00 – 16:00

Flat through the MCX morning and the London open: 0.27–0.55% an hour, about ₹0.9–1.7, on a few hundred to 2,082 contracts.

- **16:30 · US pre-market**
Wakes up: 1.17% typical, 2.36× the hour before and bigger on 10 of 13 days. It moved 1.68% on Monday, 1.33% on Tuesday and 0.88% on Wednesday.
- **17:30 · US data**
1.69% typical, 1.75% average, 2.47× the volume of the hour before. The day's biggest hour on 4 of the last 7 sessions, including 1.69% on Tuesday.
- **18:30 – 19:30 · NYMEX**
Stays strong at 1.33% and 1.51% typical on 11,906–12,233 contracts an hour. 19:30 has the biggest average (1.87%) and swung 3.00% on Wednesday and 2.21% on 2 Oct.
- **20:00 · Thursdays**
EIA gas storage. On 24 Sep gas moved about 5.8% in that single hour, from \$2.998 to \$3.176; on 1 Oct it moved 1.30%. The next one is today at 20:00 IST.
- **20:30 onwards**
Fades to 0.80–0.93%. NYMEX settlement after the MCX close lifts it to about 1.06%, which feeds the next morning's gap.

How often it happened

What these counts mean. Gas is a one-session market. Its biggest hour landed in the US window on 11 of 12 days; the exception, 5 Oct, peaked at 16:30 (1.68%), just before it. Every window in the sample averaged at least 1%, though Tuesday's was only 1.03%, so some evenings are quiet. The window average is lifted by the 24 Sep EIA hour (about 5.8%) and Wednesday's 3.00% hour; the typical (median) hours are the steadier guide.

● Your October strikes against today's estimate

Distance is intrinsic moneyness in rupees against the NYMEX-based estimate (crude ₹8,708, gas ₹315.4). + means in the money, – means out of the money; within about 1% of price is at the money. Live MCX strike premiums, volume and open interest need MCX data or your broker's option chain.

This report describes how NYMEX crude and gas have moved hour by hour over a short sample (12 complete sessions) and uses them as a proxy for MCX. Hit counts are past frequencies, not probabilities. Rupee figures are estimates from NYMEX prices × USD/INR, not MCX quotes. Volatility cuts both ways: the hours that move most can move against you just as fast. Check live MCX prices, option premiums, margins and contract specifications with your broker before trading.

T4 Session indicator

tradingview.com/script/3JINBYxx-T4-Session

Free to use on TradingView · by Subhasom Mandal · works on any chart, including MCX futures and options

This report tells you which hours usually move. T4 Session shows those hours live on your chart: it marks the Sydney, Tokyo, London and New York sessions with a range box, a label and the session's high and low, so the windows in this report line up with the candles you trade.

T4 Session on MCX Crude Oil Mini 15 Oct 8700 call, 5-minute chart

How the sessions map to this report

SESSION	DEFAULT HOURS (IST)	WHAT IT MEANS HERE
■ Sydney	02:30–11:30	Overnight and the MCX morning: the quietest hours for both contracts
■ Tokyo	05:30–14:30	Asia open: moves crude before MCX opens and sets the 9:00 gap
■ London	12:30–21:30	Europe hours: crude's 12:30–13:30 move
■ New York	18:30–03:30	US session: the heart of the V-Window; London and New York overlap from 18:30 to 21:30

Why use it with the T4 Report

- **See the V-Window on the chart.** The New York box opens at 18:30 IST, inside the 17:30–21:30 window, and the London and New York overlap is shaded in both colours.
- **Ready-made reference levels.** Each finished session leaves its high and low on the chart, such as the London range going into the US session.
- **Know where the day stands.** The live box and label show which session is running and how far price has already travelled in it.
- **Alerts instead of clock-watching.** A "Session Started" alert for each session, such as London at 12:30 IST and New York at 18:30 IST.
- **Built for the charts you trade.** Works on MCX crude and gas futures and options on any intraday timeframe, with each session's colour, hours, box and lines adjustable.

Session times are set in UTC and don't change for daylight saving. After the UK clock change on 25 Oct set London to 0800–1700, and after the US change on 1 Nov set New York to 1400–2300, in line with this report's event clock.
